Ikskile district, LV-5052, Latvia

CEO Arnis Veinbergs

Upon your request regarding the amount of manure produced by the commercial layers *Hy-Line W-36* during their production cycle, we are reporting the following:

- Young birds during their first 17 weeks of age in total generate about 5 kg of fresh manure, which is equivalent to about **30 g** of manure (with a moisture content of 70%) per bird per day.
- Mature bird, when it reaches 25 weeks of age, generates about 0.15 kg of fresh manure per day, which is equivalent to about **90 g** of manure (with a moisture content of 70%) per bird per day.

Sincerely,
Thomas Dixon

International Sales & Marketing Director of Hy-Line International
